

Bossa Nova

Bossa Nova Plugs at 21 days

Bossa Nova plugs at 30 days

3 essential steps for optimum plug production

- **Moisture** - Sowing media should be thoroughly wet at time of sowing and maintained from days 1-14. Misting well after sowing is highly recommended. Humidity should be as high as possible from days 1-14
- **Temperature** - Media temperature should be 73-78°F (23-25°C) from days 1-14 for best results
- **Daylength** - Bossa Nova should be germinated under 14 hour days from day 1 and continue to be grown under 14 hour days for the life of the crop
